Andea

HOW ANDEA
SUPPORTED AN

AUTOMOTIVE INDUSTRY COMPANY

ON THE WAY TO DIGITAL
TRANSFORMATION OF FLEET
MANAGEMENT

The situation:

With a growing reliance on artificial intelligence (AI) and Industry 4.0 becoming the new reality, an almost decade-old American automotive industry company decided to embark on a digital transformation journey. The organization felt that finding a dedicated solution geared towards its own needs would be the catalyst for further modernization. Andea's vast experience, a proven track record of implementing DELMIA Apriso, and the speed of potential deployment quickly convinced the client to join forces and work with Andea. The two companies forged a strategic partnership aiming to improve the client's fleet management.
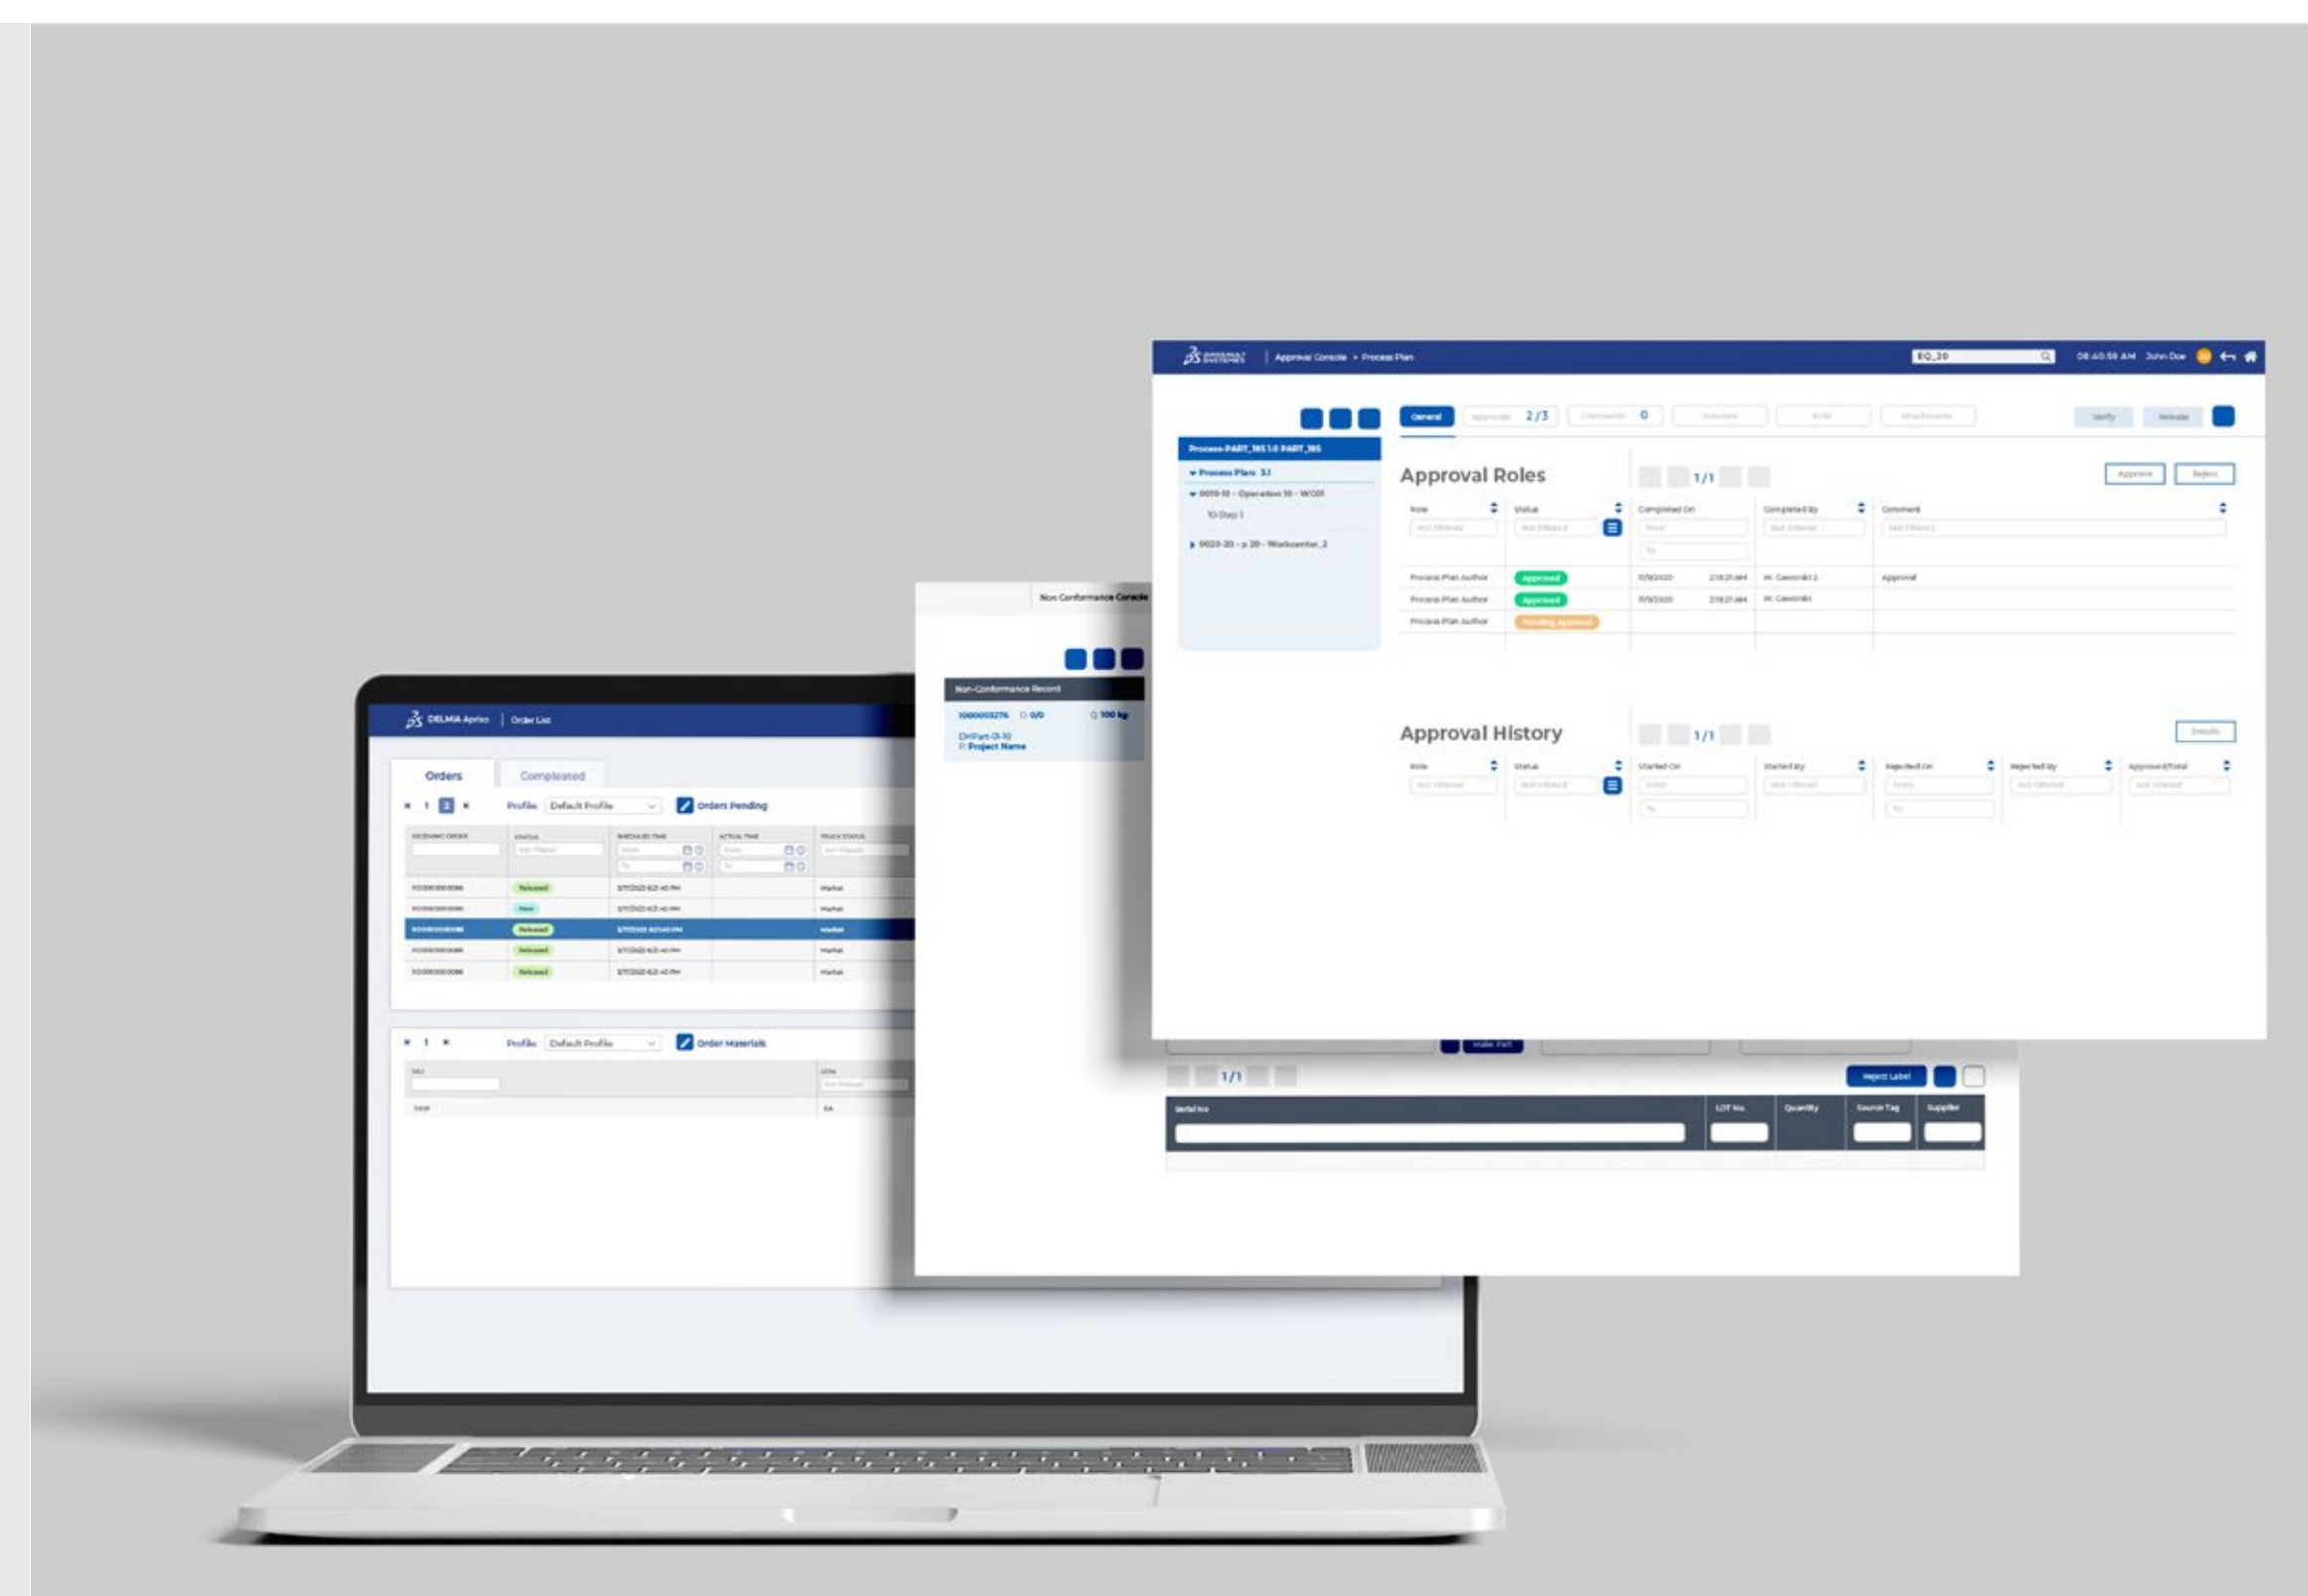

ANDEA WORKED WITH AN AUTOMOTIVE INDUSTRY CLIENT TO:

- Help improve its production and fleet management.

- Achieve full integration with Jira, Midgar, and GeoTab.

- Thoroughly test 3DX platform integration.

The solution

The DELMIA Apriso rollout at the client's facility was completed in September 2022. The first stage of implementation turned out to be the fastest in Andea's history.

The Apriso solution for fleet management and maintenance has proven to be the right tool for the automotive company and empowered the organization to address pressing technological challenges and its major pain points.

1

The results

Full integration with Jira, GeoTab, Midgar, and other systems the client had been using before implementing DELMIA Apriso made it possible for the automotive firm to improve several of its crucial operations. These processes include:

- Asset management
- Corrective maintenance
- Mileage control

- Preventative maintenance based on mileage or time
- Parts import

> "Our team efficiently achieved significant milestones, delivering exceptional results in a remarkably short time. Throughout the engagement, we not only met but exceeded all client expectations."
>
> Joanna Dąbrowska | Project Manager at Andea

Andea

Other interesting facts

The client's team was trained and supported throughout all completed project stages to be able to use DELMIA Apriso independently and autonomously.

Besides the Apriso solution successfully working in a live production environment, **Andea** and the client managed to run extensive tests for integration of the **3DX platform.** All tests gave great results, showing a very promising potential if a future deployment took place.
